Subject: SID results 12-27/Sep/26 Chester Road / School

All

The latest SID results are detailed below.

These are for September 12th - 27th 2026 based outside the school on Chester Road displaying towards vehicles exiting the village.

There are 2 x 57mph recordings over 2 evenings and plenty over 40mph.

In context, nearly 8% are driving over 30mph in a 20 zone outside a school.

Or nearly 6% between the hours of 8am and 8pm over 30mph

The SID has now been rotated facing incoming traffic to hopefully slow down traffic for a few weeks.

I will continue to record the results, but unless anything significantly changes I will save your inbox size and stockpile them for any future investigation or actions.

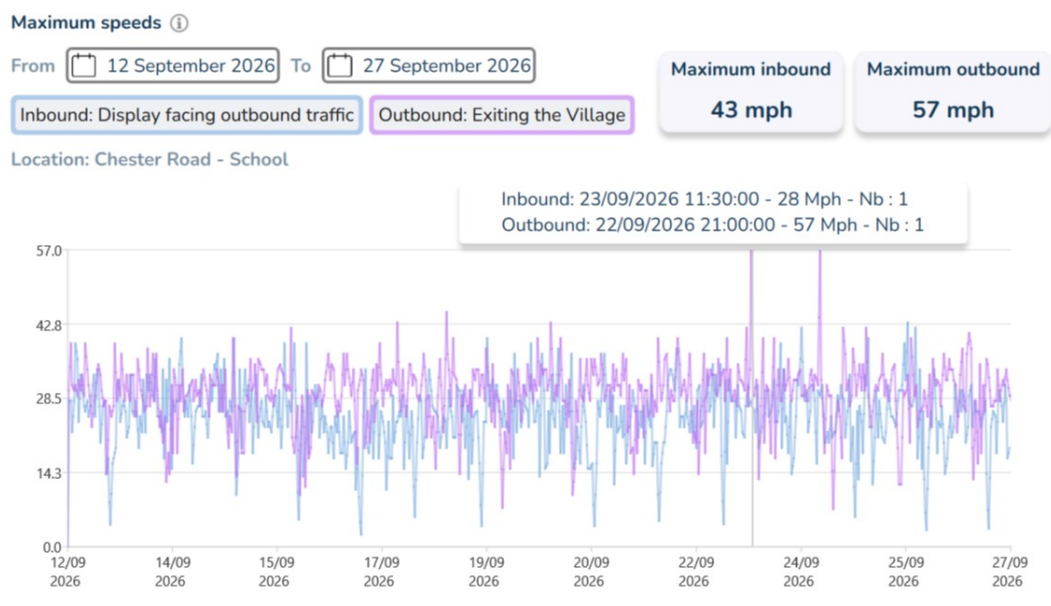

Details

9726 vehicles outbound over 15 days = 648 / day, 27 / hour

4076 vehicles inbound over 15 days = 272 / day, 11 / hour.

Total passing this section of road = 920 per day
